PROJECTS / OPEN-SOURCE

Web-Clone-Project | Link   *HTML, CSS, JavaScript*
Developed some web pages using HTML/ CSS and Javascript.
Developed a fully functional Netflix clone.

Hospital Management System | Link   *Core Java, JDBC*
In this project, I have created a database named 'hospital' consisting of three tables: Patients, Doctors, and Appointments.
This is a freelance project I created for a friend.
I have created a Figma template for our project, which will help us to understand it easily.

Weather Application | Link   *HTML/CSS, JSP, Servlet*
I have used the CurrentWeatherAPI to fetch data using Java Networking.
Developed frontend using HTML/CSS so we can put data whatever city you want to
search and that data is fetched by JavaServlet and gives current weather data as a response
on JavaServerPage.

CURD | Link   *Android(xml, Java)*
I created a registration form using android and connected it to a room database, and online database connection with xampp, performing operations such as insert, update, delete, and show.
